

WeRateDogs Insights

Greg Moffatt

The Twitter account for WeRateDogs (@rate_dogs) has a system for posting an image of the dog, and it gives the dog a rating. The dogs are almost always rating higher than a 10/10 because they're dogs, so why not. It also estimates the type of dog by an image prediction algorithm.

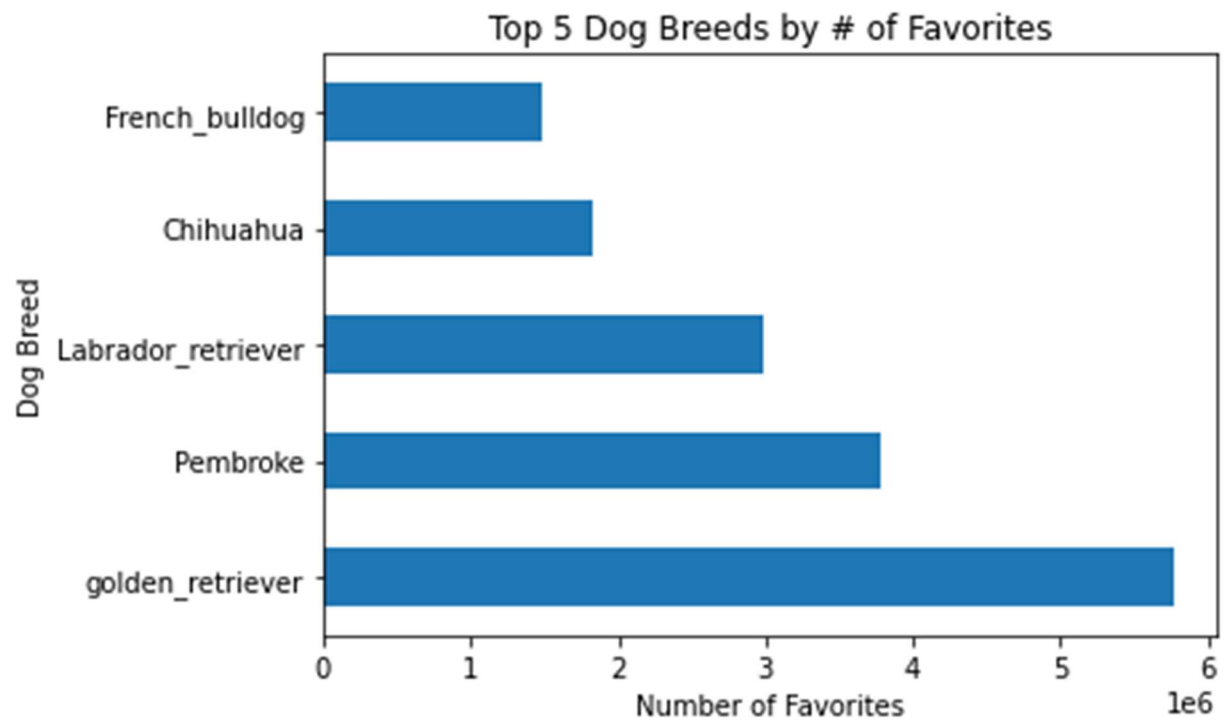

We looked at data from the account to find out what the highest numerator rating for a dog is, the most common rating for any dog, and how many favorites each of the top 5 dog breeds are getting.

First, the data shows that a Labrador Retriever doggo has a rating of 165/150, posted on 7/28/2016. This rating seems to be so high due to the number of dogs in the [video](#). Either way, I believe such a high score is more than justified.

Next, we look at the most common numerator for each rating on the account, regardless of dog type. We get the results from the image below, showing that 12 is the most common rating for any dog type. This would most likely be a 12/10

12	1232
10	1020
11	976
13	724
9	376
8	200
14	72
7	60
5	36
6	32
4	20
84	4
45	4
88	4
2	4
26	4
143	4
44	4
60	4
50	4
80	4
99	4
24	4
165	4
3	4
27	4
1	4

Finally, we looked at the highest rated dog breeds based on the total number of favorites the dog breed got. The top 5 breeds were Golden Retrievers, Pembroke, Labrador Retrievers, Chihuahuas, and French Bulldogs, shown in the image below

Using the data from this Twitter account, we can see what the highest rated dog is, what the most common rating for any dog breed is, and what the top 5 dog breeds are by total favorite count are.
